

Anti Shock, ventable, pilot operated, balanced poppet relief valve

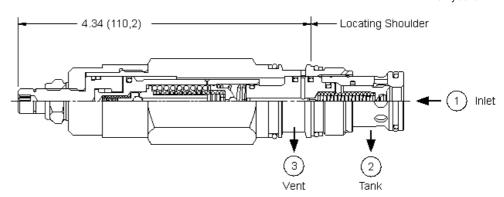

SERIES 2 / CAPACITY: 120 L/min. / CAVITY: T-2A

snhy.com/RVET

Ventable, pilot-operated, anti shock relief cartridges limit maximum system pressure and also limit the rate of pressure rise. The valve opens and then ramps closed at a constant speed, independent of settings and flows. These 3 port valves include a vent port (port 3) that connects between the main piston and the pilot stage to provide for remote control by other pilot or 2-way valves. The adjust screw determines the maximum (relief) setting and the minimum (threshold) setting.
